

Use of School Facilities During Summer 2021

Rev. April 1, 2021

Background

With vaccination for COVID-19 scaling up, it is likely Vermont will see significantly improved conditions (reduced community transmission) beginning in late spring and continuing to improve over the summer months. Summer programming will be an important part of Education Recovery efforts, and a very valuable resource for schools, students and families.

Use of Facilities for Summer Activities and Programming

School districts should plan to use their facilities in a manner consistent with normal operations this summer, and open their facilities to outside group use as they normally would. As we get closer to the end of the school year and have a better picture of prevailing conditions, the Vermont Department of Health may issue separate guidance on health and safety procedures for these programs.
