
Rule 4509 Recommended Physical Restraint Training Programs

This list contains recommended programs that provide physical restraint training, in alignment with rule 4509 in Rule 4500: Use of Restraint and Seclusion in Schools. NOTE: Physical restraint is permitted only as a last resort and only under specific circumstances. See Rule 4502.1 for those specific circumstances.

The following physical restraint training programs have provided evidence that they:

- train on appropriate procedures for preventing the need for physical restraint,
- include an emphasis on positive support and relationship building,
- instruct on the alternatives to physical restraints,
- identify dangerous behavior that may indicate the need for physical restraints,
- offer methods for evaluating the risk of harm to determine if physical restraint is warranted,
- provide simulated experience in administering a variety of physical restraint techniques across a range of increasingly restrictive interventions,
- instruct regarding the effect of the physical restraint on the person restrained,
- reference the need for a physical exam as soon as possible following restraint, emphasizing the need to follow the state and local policy, practices, and procedures, and
- direct participants to the state rule (Rule 4507) regarding the investigation of injuries and complaints.

Contact Information:

If you have questions about this document or would like additional information, please contact:

Kate Anderson, Student Support Services, at kate.anderson@vermont.gov.
An asterisk (*) after the program name indicates at least six of the following eight Vermont Agency of Education-identified best practices are evident:

1. This program specifically addresses the needs of educational professionals working in a school setting, where the individuals being restrained are youth (ages 3-21). NOTE: For 3, 4, and 5-year-old children in Universal Prekindergarten programs, contact the AOE Early Learning Team regarding the developmental appropriateness of restraint and seclusion.
2. This program uses evidence and data to develop and refine its materials.
3. Training materials are regularly updated to reflect new research.
4. This program includes a meaningful, embedded discussion of implicit bias and its potential impact on disproportionate restraints based on gender, race, ethnicity, disability status, and other marginalized identities.
5. This program identifies prone and supine restraint as most restrictive and indicates they must only be used when student size and/or severity of behavior necessitate them, or when other forms of restraint have been unsuccessful in preventing risk of serious physical harm.
6. This program clearly distinguishes between procedures for moving, escorting, and transferring people compared to stationary restraints.
7. Materials discuss best practices for debriefing a restraint incident with the student involved, the staff involved, the student’s family, and the rest of a student’s support team where appropriate.
8. Appropriate procedures for conducting a medical evaluation of a person after restraint has ended and when to seek outside medical assistance for a student or staff.

NOTE: This list of programs will be periodically updated. If an LEA is using a physical restrain training program not on this list, or a physical restraint trainer would like to be considered for inclusion on this list, submit the Rule 4500 Recommended Physical Restraint Training Program Request for Inclusion.
